

Business Requirement Document (BRD)

Project Name: Customer Onboarding Automation

Version: 1.0

Date: September 22, 2026

Author: Twasif

Revision History:

- v1.0 Initial Draft

Executive Summary:

This project aims to automate the customer onboarding process for a product-based company, reducing manual effort and improving accuracy.

Business Objectives:

- Streamline onboarding workflow.
- Reduce human error in data entry.
- Improve customer satisfaction with faster onboarding.

Scope:

In-Scope:

- Automated form filling.
- Document verification using OCR.
- Integration with CRM system.

Out-of-Scope:

- Marketing automation.
- Customer support ticketing.

Functional Requirements:

- System must capture customer details via web form.
- System must validate uploaded documents.

- System must push verified data into CRM.

Non-Functional Requirements:

- Performance: Handle 10,000 onboarding requests per day.
- Security: Encrypt customer data in transit and at rest.
- Compliance: GDPR and ISO 27001 standards.

Use Cases:

1. Customer submits onboarding form.
2. System validates documents.
3. System integrates with CRM and creates customer record.

Dependencies & Constraints:

- Requires CRM API access.
- OCR library dependency.
- Limited to English-language documents.

Acceptance Criteria:

- 95% accuracy in document validation.
- Onboarding completed within 5 minutes per customer.

Appendices:

Glossary:

- CRM: Customer Relationship Management
- OCR: Optical Character Recognition
